

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

Telegraphic Reports for Week Ended June 12, 1920.

These reports are preliminary, and the figures are subject to change when later returns are received by the State health officers.

City Reports for Week Ended May 29, 1920.

During the week ended May 29, 1920, one death from pellagra was reported at Charleston, S. C., and one at Montgomery, Ala. One case was reported at Memphis, Tenn., and one at New York, N. Y.

PLAGUE.**Pensacola, Fla.—Human Plague.**

A case of human plague developed in Pensacola, Fla., June 8, 1920, and the diagnosis has been confirmed.

The patient (P. G.) died June 12. He resided and worked 1 mile north of the business section of the city.

A second case was reported June 15. Both patients were residents of Pensacola and had no history of exposure to infection outside or on ships.

PLAGUE—Continued.

California—Rodent Plague.

The following table shows the number of ground squirrels (*Citellus beecheyi*) confirmed as plague infected during the week ended May 29; also the number of squirrels collected for examination during the same period:

County.	Plague infection confirmed during week.	Squirrels collected.	County.	Plague infection confirmed during week.	Squirrels collected.
Alameda.....	2	628	San Joaquin.....	1	119
